

Your Powerful Laboratory Equipment Partners Over 500 Years of German Innovation

When leading manufacturers of laboratory equipment join forces, something greater than technology emerges – it's trust, precision, and success. Discover the excellence of German engineering through the process steps of feed analysis, powered by the best devices in the industry.

1. Sample Preparation

Efficient homogenization with the **P-14 rotor mill**

- Easily convertible to a cutting mill
- 2.000 rpm to 24.000 rpm
- Patented cooling system
- Food & Feed
- Polymers & Recycling
- Pharmaceuticals

[more info](#)

2. Fibre determination

With the FibreBag-technology of the **FIBRE THERM**

- Fully automatic fibre analysis for up to 12 samples
- Precise, reproducible results thanks to the FibreBag technology
- Crude fibre
- NDF and ADF
- Chitin analysis

[more info](#)

3. Gentle Drying

Determination of the dry matter with the **Universal oven UF55**

- Precise, constant and gentle tempering
- Temperature range: up to + 300°C
- Material tests
- Ageing of electronic components
- Drying and tempering

[more info](#)

4. Starch analysis acc. to Ewers

Determination of starch and sugar in the **Polarimeter UniPol V**

- High-quality optical components
- Field-proven accessories
- Identification of isometric purity
- Classic sugar analysis
- Specific optical rotation

[more info](#)

5. Mixing accuracy test

Trace analysis using photometry in the **UV/VIS Spectrophotometer**

- Magnetic quick-change cuvette holder (10×10 mm)
- Internal memory for up to 200 methods & 100 standard curves
- Spectrum scans (wavelength scans)
- Kinetic measurements
- DNA/RNA measurements
